Karan Shete

Senior Distributed Systems & Forward-Deployed Engineer

Zurich, Switzerland | shetekaran50@gmail.com | linkedin.com/in/karan-shete-311966140 | github.com/karan-sss | karan-s.com

SUMMARY

7+ years architecting mission-critical distributed systems, event-driven pipelines and cloud infrastructure in Java and Spring Boot. Embedded on-site with enterprise stakeholders in Zurich since 2024, taking ambiguous business problems from whiteboard to load-tested production. Best Performer award four times across enterprise deliveries.

EXPERIENCE

Tata Consultancy Services (TCS)

Developer Lead, on-site | Zurich, Switzerland | 2024 – present | Distributed APIs & Kafka modernisation

- Lead developer for one tenant of a multi-tenant customer portal: a bounded-context API layer fanning out in parallel to several downstream services, isolating each tenant's traffic and failures.
- Two-tier cache (L1 Caffeine, L2 Redis) in front of slow legacy downstreams: ~90% hit rate, p95 latency down ~70%. Resilience4j circuit breakers and bulkheads per downstream.
- Locust load tests drove horizontal pod autoscaling, sustaining 2,000 concurrent users (~400 RPS across 4 pods).
- Replaced a legacy IBM MQ integration with an event-driven Kafka pipeline over PostgreSQL and Elasticsearch, fed by a daily Apache Camel job scanning ~50M records. Zero-data-loss cutover: full reload via a new consumer, then a live delta switch; backpressure-aware consumers with dead-letter topics.
- Elasticsearch phonetic search at sub-100 ms; service auth moved from mTLS to OIDC / JWT, validated with JMeter.

Senior Developer | Pune, India | 2023 – 2024 | Enterprise backend & platform delivery
Software Developer | Pune, India | 2019 – 2022 | Multi-tenant ITSM & Camunda orchestration

- ServiceNow-style ITSM product serving 10+ tenants: hierarchical multi-tenant data isolation; ticket lifecycles as auditable Camunda BPMN state machines.
- Led a strangler-fig migration from AngularJS 1.6 to Angular 14, module by module, without halting feature delivery.
- Built a test execution platform: one microservice runner for load, UI (Selenium) and API suites.

PROJECTS

Self-hosted production platform (open source) | github.com/karan-sss/project-infra
Runs karan-s.com for €7 a month (CI cost guard): Terraform, Cloudflare, zero-trust Tailscale admin, signed images, automated restore drills, 14 ADRs.

Esports slot-booking bot | Node.js, Discord, Razorpay
Discord slot registration with a cron-promoted waiting list and Razorpay payments: 15,000+ users, manual sign-ups down 95%. Also: event-driven Node.js microservices over RabbitMQ and MongoDB.

SKILLS

- **Backend:** Java, Spring Boot, Hibernate, Apache Camel, Camunda BPMN, Resilience4j, Node.js, Python
- **Messaging and data:** Kafka, IBM MQ, RabbitMQ, PostgreSQL, MS SQL, MongoDB, Redis, Elasticsearch
- **Platform and testing:** Kubernetes, OpenShift, Docker, AWS, Google Cloud, Terraform, GitHub Actions, Grafana, JMeter, Locust, OIDC / JWT

EDUCATION AND LANGUAGES

B.E., Pune University, 2018 · English: full professional · German: A1, A2 in progress
